HEADLINE: PORT-A-COOL JETSTREAM™ 1600 IS CUSTOMER DESIGNED

PORT-A-COOL JETSTREAM™ 1600, the newest offering from Port-A-Cool, LLC, is not just a unit designed for the customer, but is truly a unit designed by the customer.

Current Port-A-Cool® unit owners were asked in a company conducted survey, “If you could design a new model, what features would you include?” Responses included louvers to direct airflow; dual water fill options utilizing the built-in reservoir or a garden hose; quieter operation; a built-in cord wrap; and a larger reservoir allowing for longer run times. All of these are features are found in the all new **PORT-A-COOL JETSTREAM™ 1600** portable evaporative cooling unit which cools up to 1,000 square feet making it perfect for mechanic’s bays, work shops, small work areas, patios, decks ... anywhere air conditioning is ineffective or cost prohibitive.

The new model includes standard Port-A-Cool® unit features that have made the name a trusted leader in portable evaporative cooling. All Port-A-Cool® units lower temperatures 15 to 25 degrees Fahrenheit using tap water and 115 volts of electricity for an average utility cost of 7.5-cents to 28.2-cents per hour, depending on unit size. The one-piece housing that eliminates leaks and rust, and premium quality KÜÜL® Pads cooling media are just two of the features that make Port-A-Cool® units a portable, powerful and practical cooling choice.

Port-A-Cool® portable evaporative cooling units are the industry standard. For the location of a distributor near you, or for answers to your questions about Port-A-Cool® products, call 1-800-695-2942, or log on to www.port-a-cool.com.
