### **HEADLINE: PORT-A-COOL® OFFERS ENVIRONMENTALLY-FRIENDLY COOLING SOLUTIONS**

The world is becoming more sensitive to the term “green” and what it means to our environment and the health of our planet. Many companies are rushing to redefine their products and business practices to “go green.” Some companies, however, have always been green without even trying to be politically correct. It was just the right thing to do. Port-A-Cool, LLC, is one of those companies.

For example, the flagship product for the company is the Port-A-Cool® portable evaporative cooling unit, manufactured in Center, Texas. The unit features a one-piece, rotationally molded plastic housing which is leak and rust proof and produced at the company’s manufacturing facility. The company recycles all scrap plastic from the manufacture of the units and uses recycled plastic in the mold, reducing waste and harm to our environment.

In addition, the unit itself uses a cooling method that is environmentally friendly. The ancient Egyptians used the same principles of evaporative cooling to cool their homes by hanging a damp mat in the doorway and allowing the wind to evaporative the water and provide cooling. Port-A-Cool® units utilize the same natural cooling methods, but have implemented state-of-the-art technology to perfect the process, always keeping in mind the company’s commitment to preserving our environment. The water, which is held in a sump tank inside the unit, is pure enough to water your garden. Only tap water and 115v of electricity are required to operate the unit. Port-A-Cool® units use less than a dollar a day in resources to provide air an average of 15-25 degrees F. cooler than surrounding air. Because the Port-A-Cool® unit uses a natural cooling process, no harmful greenhouse gases, like CO<sub>2</sub> expelled from traditional air conditioning systems, are released into the air to harm our ozone layer.

An environmentally friendly process for cooling, coupled with being “green” before “green” was cool. That has always been the “natural” choice for Port-A-Cool, LLC.
