HEADLINE: NEW PORT-A-COOL® CYCLONE UNLIKE ANY OTHER MODEL

Port-A-Cool, LLC, the manufacturer of Port-A-Cool® portable evaporative cooling units, announces the new Port-A-Cool Cyclone™ 3000, a model unlike any other in their product line up.

Port-A-Cool Cyclone™ 3000 features a unique centrifugal air delivery system, eliminating the fan blade and reducing noise, but without sacrificing power. The small unit measures just 38 inches high by 30 inches deep and 29 inches wide and weighs only 100 pounds, but produces a powerful 2400 CFM air delivery that cools approximately 700 square feet of unobstructed space.

This powerful unit features a spacious 22-gallon water reservoir. That's enough water for eight hours of cool air without a garden hose or other outside water source.

Just like all Port-A-Cool® units, Port-A-Cool Cyclone™ 3000 is manufactured of durable, rust and leak-proof polyethylene plastic, requires very little maintenance, and features simple operation. Just fill the tank with water, plug it in and feel the cool air. Port-A-Cool Cyclone™ 3000 lowers the temperature an average of 15° to 25° F. using just tap water and 115v of electricity.

You'll find Port-A-Cool Cyclone™ 3000 is perfect for mechanics bays, workshops, small work areas, personal cooling, or anywhere traditional air conditioning methods are ineffective or cost prohibitive.

For more information, or to locate a distributor near you, call 1-800-695-2942 or 936-598-5651. Or, you can visit the manufacturer online at www.port-a-cool.com.
